

# Cryptography

## Exercise 5.1 ( / / )

1. Split into working groups of 4 students
2. Each group is assigned one of the topics (by consensus or randomization) described on the following slides
3. Every group prepares a digital presentation of 15-20min on their topic
4. At least *2 days before* the presentation a PDF export of the slides is uploaded on Moodle (once per group)
5. All groups present their topic to all their classmates who can ask questions afterwards

# Presentation Format

- ~20-30 minutes presentation
  - *every* group member *has to* present for at least 5min
- ~5 minutes Q&A

 *The presentation can be written and held in  or  based on each group's own preference. Just do not mix English and German slides. English slides but presentation held in German is fine.*

# Topics

1. Cryptographic Hash Functions & Key derivation functions
2. Block Ciphers
3. Stream Ciphers
4. Asymmetric-key Cryptography
5. Authenticated Encryption
6. Modern Protocols

# Cryptographic Hash Functions & Key derivation functions

SHA-2, SHA-3, BLAKE2

scrypt, Argon2

- Introduction to the concept - what problems does it solve?
  - Disambiguation between hash functions and key derivation functions
- Description of the algorithm
- Known cryptographic issues
- Recommendations or related information

 *Please provide a list of sources referred to in the presentation as the final slide.*

# Block Ciphers

(DES/3DES), AES/Rijndael

- Introduction to concept of block ciphers
- Description of the algorithm
- Known cryptographic issues
- Recommendations or related information

 *Please provide a list of sources referred to in the presentation as the final slide.*

## ChCha20

- Introduction to concept of stream ciphers
- Description of the algorithm
- Known cryptographic issues
- Recommendations or related information

 *Please provide a list of sources referred to in the presentation as the final slide.*

# Asymmetric-key Cryptography

## RSA, Ed25519/X25519, ECDH

- Introduction to concept of asymmetric-key cryptography
- Description of the algorithm
- Known cryptographic issues
- Recommendations or related information

# Authenticated Encryption

ChaCha20-Poly1305, AES-[GCM, CCM, EAX]

- Introduction to concept of authenticated encryption
- Description of the algorithm
- Known cryptographic issues
- Recommendations or related information

 *Please provide a list of sources referred to in the presentation as the final slide.*

# Modern protocols

TLS [1.2, 1.3], [Signal Protocol](#), [Wireguard](#), [Noise Protocol Framework](#)

- Introduction to the protocol
  - Intended use
- Description of the used primitives
- Known cryptographic issues
- Recommendations or related information

 *Please provide a list of sources referred to in the presentation as the final slide.*

# Timeline

- Tue, 14.11.2023 (*today*)
  - Group building & topic assignment
- Sun, 03.12.2023 (+3 weeks)
  - All PDF-exported presentations uploaded on Moodle
- **Tue, 05.12.2023** and most likely **Tue, 19.12.2023** (+2 days)
  - **All groups present their topics** between 13:15 and 15:45
